Hello!

Thank you for purchasing *Practical Python and OpenCV*, the best, guaranteed quick start guides to learning the fundamentals of computer vision and image processing.

Here are the answers to some commonly asked questions:

Q. What program do I use to open the book?

A. Both the Practical Python and OpenCV and Case Studies book are PDF files. If you are on a Mac, you can use the "Preview" application. Otherwise, I recommend you use Adobe Acrobat PDF Reader. You can download it for free using this link: <http://get.adobe.com/reader/>

Q. How do I install and use the VirtualBox virtual machine? (Premium Bundle only)

A. I have created a short screencast demonstrating how to install and use the virtual machine. Check out the `HowToImportAndUseYourVirtualMachine.mp4` file in this directory. I recommend that you use Apple's QuickTime for viewing the movie, available here: <https://www.apple.com/in/quicktime/download/>

A. My question hasn't been answered, what should I do?

Q. Send me an email at adrian@pyimagesearch.com and I'll be happy to help.
